

### How to Install an Add-On Full Spectrum Heater

#### You will need:

- 2 persons

#### Important - Please disconnect the sauna from the power supply

1. Remove the existing screws in the sauna door (in the middle of the glass door).
2. Align the holes on the back of the heater with the holes in the door. Attach the heater to the glass through the pre-drilled holes using the screws and washers provided.

3. Plug in the heater as shown below. This socket is usually located on the floor or slightly above in the front wall of the cabin.

### Premier, Sanctuary and Outdoor Models:

A one-time activation needs to be carried out using the keypad:

1. Switch on the infrared cabin by pressing the "Power" button
2. Use the button at the bottom right to set the setting to Celsius
3. Use the "TEMP" button to set the cabin to 60 degrees
4. Press and hold the "AUX" button for 5 seconds until you hear a click coming from the roof. The heater should light up red now.
5. [Quick Video Demonstration](#)

### Essential Models

A one-time activation needs to be carried out using the keypad:

1. Switch on the infrared cabin by pressing the "Power" button
2. Set the temperature to the highest setting
3. Press and hold the indoor & outdoor light buttons simultaneously for five seconds

4. Reconnect the sauna and enjoy your next sauna session.
